

How to ready the chalet for use

1. Heating

The heating is automatic. The temperature is set to 20°C. In the night and from 10 AM to 3 PM, the temperature is lowered. It is possible to use the wood burning stove in the dining room. Please do not use the electric heaters in the rooms, they are disconnected. The electric heaters in the bathroom and toilet on the ground floor are working.

2. Hot water and electric induction stove in the kitchen

Under the sink, there are two big white switches. The left one switches on the water boiler for the sink. The right one switches on the electric induction stove. Please leave them switched on your entire stay.

The water for the bathrooms is heated by the solar energy (or by electricity when the sun is not shining enough) automatically.

3. Refrigerator

At the top of the refrigerator, there is a knob, reachable when the door is open. Turn it to switch the refrigerator on and set it as needed. The green LED is lit, indicating the refrigerator switched on. The other switch only switches the light on or off.

Please separate the litter. There are three litter bins under the staircase provided for this purpose.

We wish you a pleasant stay.
